Internship Expo 2021

WORKING WITH A DESIGN SYSTEM

Visma

Visma is one of Europe's largest software-companies specialising in software for businesses in industries such as accounting, HR, school, and welfare.

Product Design Hub

The purpose of the product design hub at Visma is to create tools that empower product development teams within Visma. One of the main tasks is to develop and maintain a design system for Visma products. They develop and maintain a toolkit in Figma that is used to create and test prototypes, as well as a web library that serves as both a resource for building web applications and a live preview of the design system.

Ivar Lundin - Interaction Design - IDK19

Working with Figma as a UX Designer

- Recreating existing components
- Transfering components from Adobe XD to Figma
- Creating advanced components with multiple variations for different use cases and situations
- Exploring the Figma Plugin API for the purpose of using it in order to switch between color themes

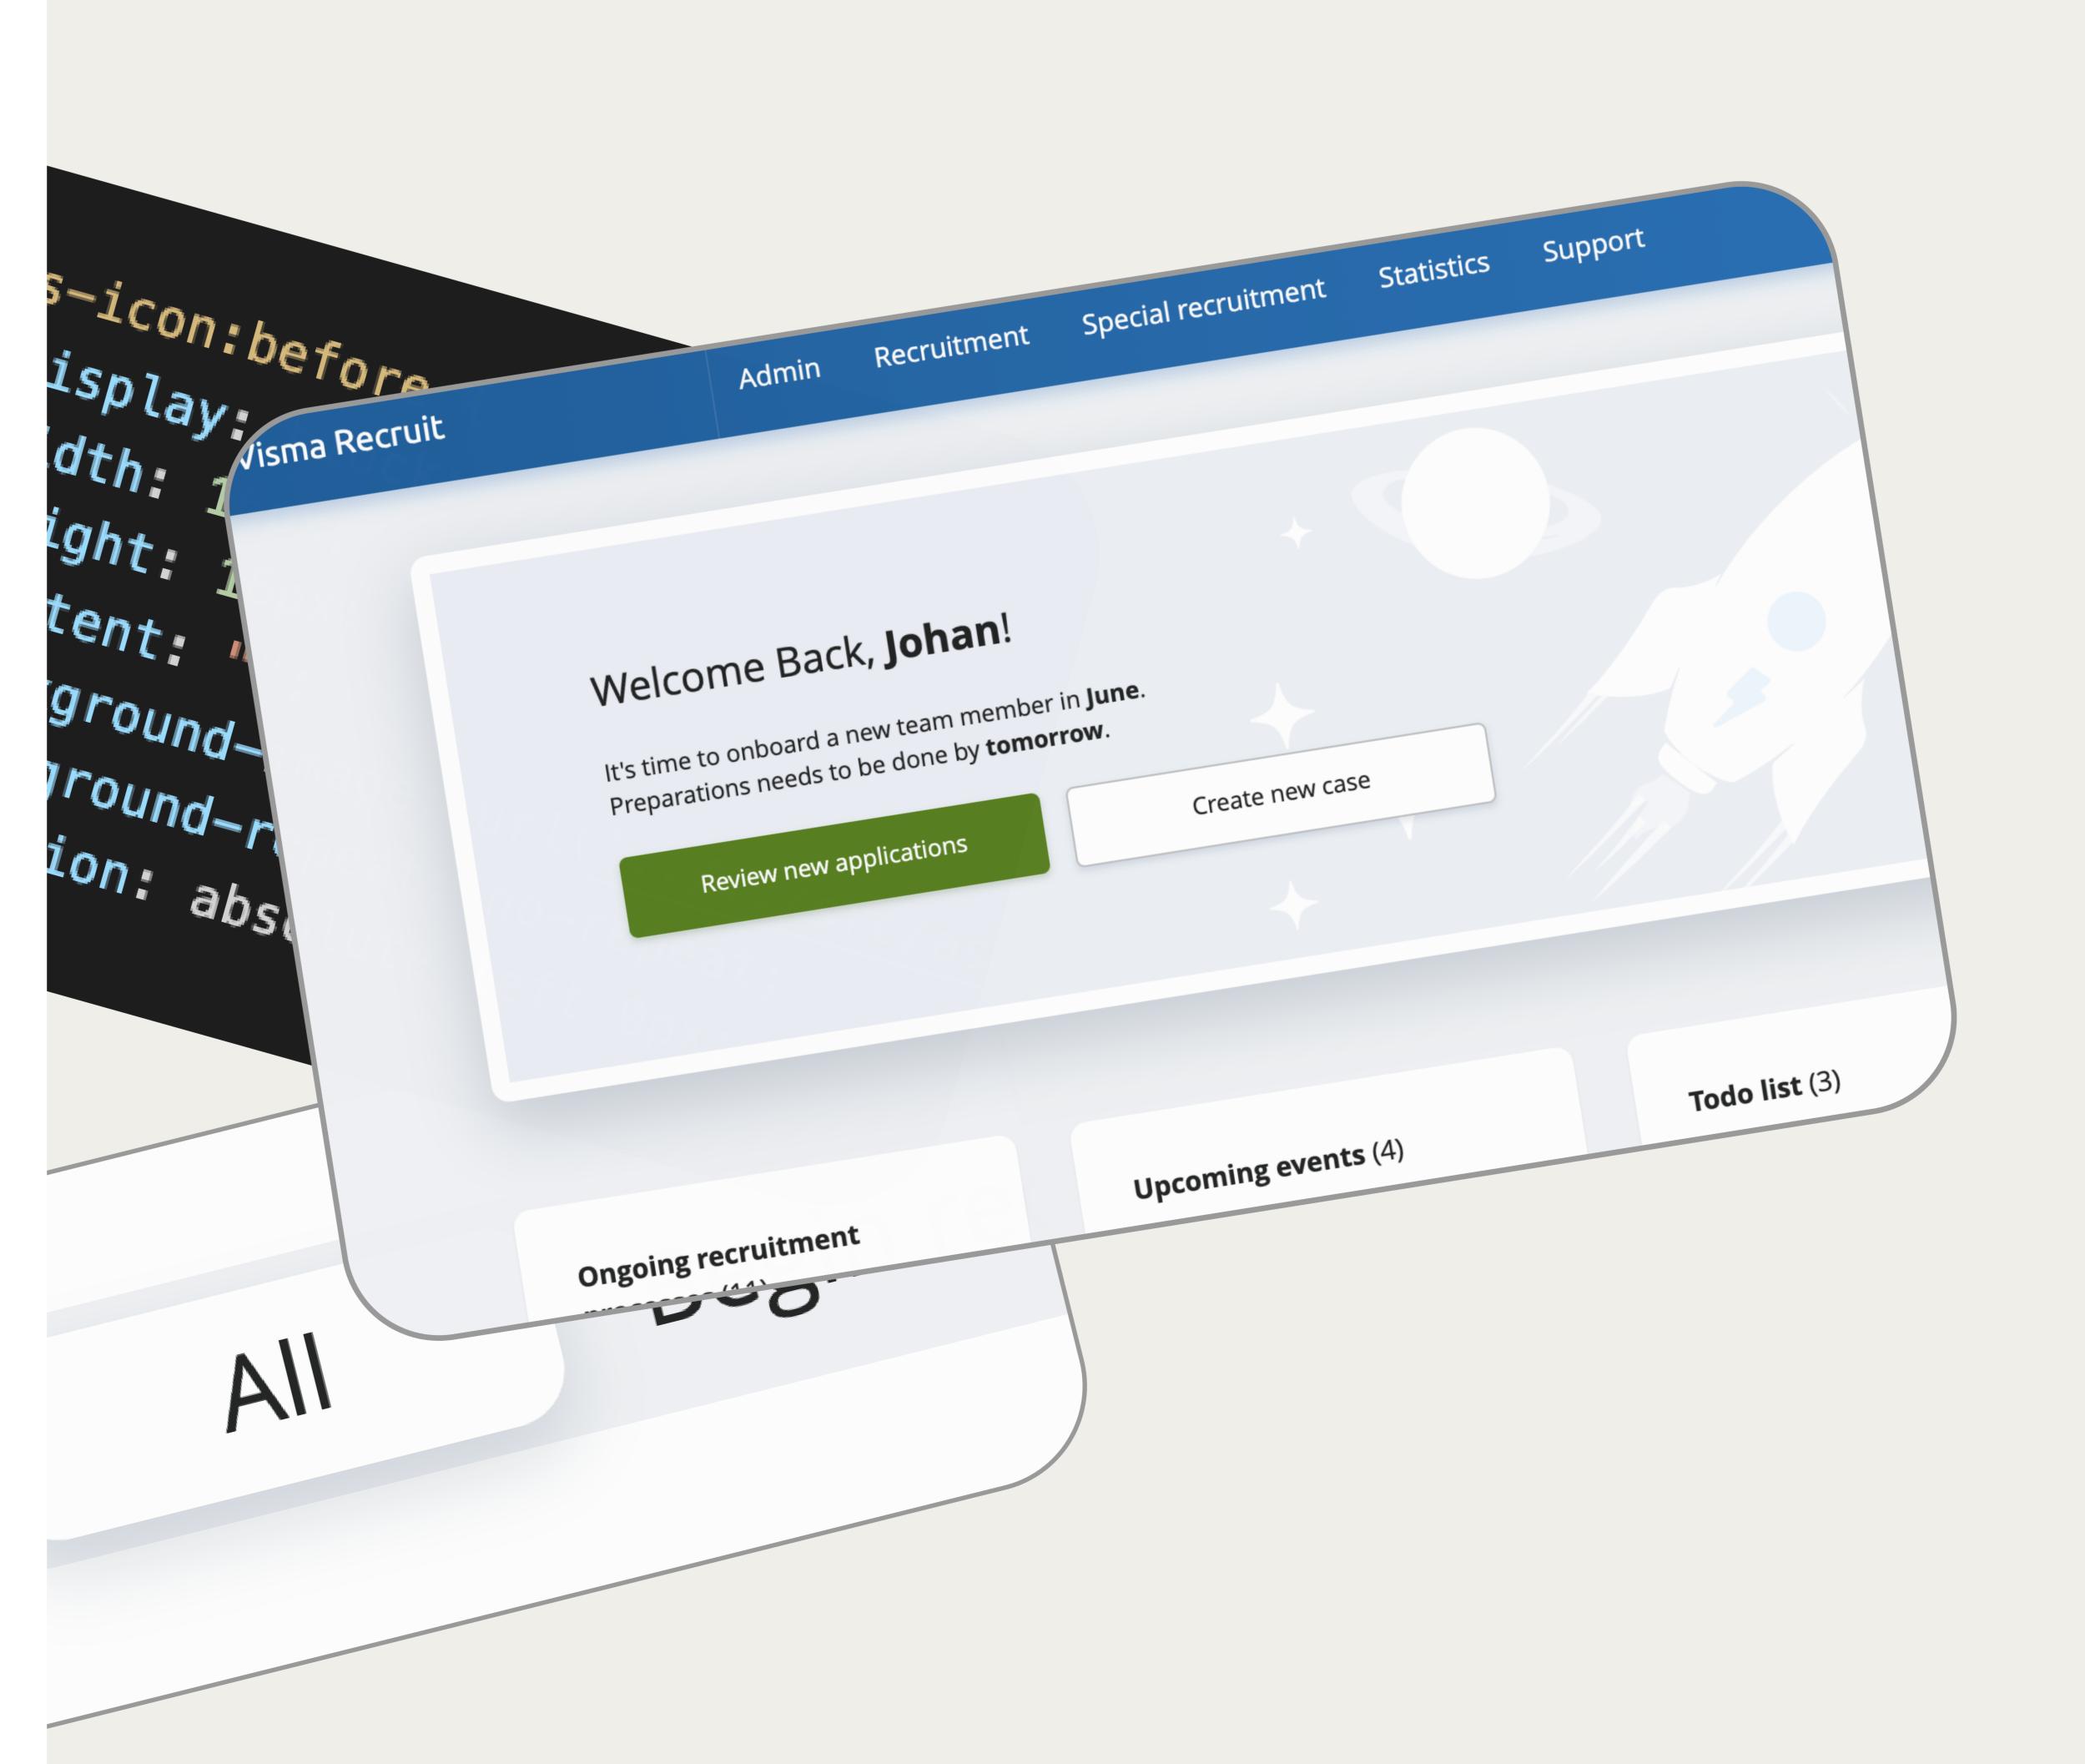

Attending AI Conference in Copenhagen

Working with predefined design-patterns and components

Bi-daily standups with the team

Attending
Visma UX Days

Expanding my programming skillset

Working with the web-library as a Front-end Developer

- Developing a prototype based on designs made by Visma's UX designers
- Modifying existing library components into new designs
- Contributing with changes that have been implemented
- Troubleshooting and bugfixing
